

## Environmental Policy

Autoliv and Norma, leading manufacturers of automotive safety components, are committed to saving lives through the development and production of high-quality and safe safety systems.

Our goal is to operate sustainably, developing and manufacturing products in a resource-efficient manner, protecting the environment, preventing pollution and reducing negative environmental impacts, without compromising product quality or safety.

To meet our environmental commitments:

- Applies a management system in accordance with the ISO 14001 standard based on continuous improvement, considering the specific nature of business conducted, and associated environmental impacts.
- Complies with all applicable environmental legislative and other requirements, including compliance obligations, related to our operations and products.
- Applies a various of solutions to reduce its climate footprint with emphasis on increasing the use of renewable energy.
- Strives for continuous improvement of resource efficiency, with particular emphasis on energy, raw materials, and water.
- Continuously takes measures related to responsible waste management and pollution prevention, in particular related to air, soil, and water quality.

In addition we engages in continuous training of employees on relevant environmental topics, and knowledge sharing with relevant stakeholders to promote environmental responsibility.

Management is responsible for adherence to this policy and all employees share the responsibility for ensuring that the commitments are met.
